

7 - day program

Qualification Overview

The Certified Data Centre Design professional™ qualification brings together the essential components of proficiency to independently certify that an individual is professional, highly skilled, knowledgeable and more than an expert; a qualified person with a contemporary standards compliant and European code of conduct visualization of what is required to create preminent Data Centres and best practice to manage and maintain them.

This BTEC qualification from Edexcel combines Certified Data Centre Design, Data Centre Power; Data Centre Cooling, Data Centre Efficiency and Data Centre Management as the only complete Data Centre qualification available worldwide. The program is intended to furnish Data Centre Professionals with depth and breadth of learning and to provide independently verified proof of competency. The unit based structure of the overall qualification allows flexibility to take each unit at your convenience over a period of time and to acquire an additional core qualification in Certified Data Centre Design.

It doesn't stop there however; two optional units, Data Centre Technician and Telecommunications Project Management provide three additional qualifications; two BTEC and one from TPMA. That completes the package to give an outstanding Advanced Professional level 5 BTEC qualification from Edexcel that provides an unbeatable industry recognized and endorsed level of capability that places you ahead of your competition.
